Campaign – Overages Reporting

1. Overview

The Campaign – Overages dashboard provides a comprehensive view of contract limits, usage, and overages/underages for SMS and Email campaigns. It enables marketing, finance, and operations teams to monitor usage relative to contractual thresholds, forecast overages, and proactively manage costs.

2. Purpose

- Track SMS and Email usage against contract limits.
- Identify overages or underages in real time.
- Forecast potential overage costs for proactive financial management.
- Support decision-making to optimize campaign resource utilization and reduce unnecessary costs.

3. Data Sources

- **Contract Management System:** Contract limits and terms for SMS and Email.
- **Campaign Platforms:** Actual usage logs for SMS and Email campaigns.
- **Financial Data:** Forecasted and actual overage costs.
- **Tools:** Power BI for visualization; SQL for data extraction, KPI calculation, and trend analysis.

4. Key Metrics / KPIs

- **Contracts:** Defined SMS/Email usage limits per customer or campaign.
- **Email/SMS Usage %:** Percentage of usage relative to contractual limits.
- **Overages %:** Percentage of usage exceeding contract limits.
- **Forecasted Overages:** Projected usage beyond contract thresholds.
- **Amounts:** Monetary value associated with overages for budgeting and cost control.

5. Architecture & Technical Design

- **Data Pipeline:**
    - **Extract:** Pull contract terms and campaign usage data from respective systems.
    - **Transform:** SQL scripts calculate usage percentages, forecast overages, and map financial impacts.
    - **Load:** Power BI data model enables interactive dashboards and alerts for overages.
- **Dashboard Views:**
    - **Live Usage View:** Current usage versus contract limits for SMS and Email.

    - **Forecast View:** Projected overages for upcoming periods.
    - **Trend Analysis:** Historical usage trends and overage patterns.
- **Data Governance:**
    - Metrics are validated and timestamped for accuracy.
    - Standardized calculations ensure consistency across campaigns and contracts.

6. Operational Features

- Drill-down from overall usage to campaign-level SMS/Email metrics.
- Alerts for approaching or exceeded contract limits.
- Visual comparison of actual vs. forecasted overages.
- Historical trend tracking for usage patterns and cost optimization.
- KPI-based reporting to support financial planning and operational decision-making.

7. Benefits & Use Cases

- **Minimized Overage Costs:** Early detection of usage overages allows corrective action.
- **Optimized Resource Utilization:** Ensures campaigns stay within contractual limits.
- **Proactive Financial Planning:** Forecasted overages provide insight for budgeting and resource allocation.
- **Operational Visibility:** Clear view of SMS/Email usage enables better campaign management.
- **Data-Driven Decision Making:** Supports leadership in allocating resources efficiently and avoiding unnecessary costs.

8. Conclusion

The Campaign – Overages dashboard consolidates usage and contract data into actionable insights. By tracking SMS and Email usage against contractual limits and forecasting potential overages, it enables teams to minimize costs, optimize resource utilization, and plan proactively for campaign and financial success. The dashboard provides validated KPIs, real-time monitoring, and historical trend analysis to support informed, data-driven decision-making.
